INHOUD.

Bladz.

Lijst van waarnemingsstations in Nederland v

Voorrede . . . . vii—viii

Waarnemingen in Nederland in 1897, bevattende:

Afdeeling I. Waarnemingen driemaal daags gedaan te de Bilt, Groningen, Helder, Vlissingen, Maastricht, Hellevoetsluis, Tilburg en Winterswijk . . . . 1—96

Afdeeling II. Maandoverzichten der driemaaldaagsche waarnemingen te de Bilt, Helder, Leeuwarden, Groningen, Assen, Amsterdam, Oude-Wetering, Katwijk, Rotterdam, Hellevoetsluis, Vlissingen, Oudenbosch, Tilburg, Maastricht, Zutphen en Winterswijk . . . . 97—112

Afdeeling III. Waarnemingen omtrent regenhoeveelheden voor ± 100 stations . . . . 113—160

Afdeeling IV. Afwijkingen van den thermometer te Groningen, Leeuwarden, Helder, Utrecht, Hellevoetsluis, Vlissingen, Maastricht, Assen en Tilburg en van den barometer te Delfzijl, Groningen, Leeuwarden, Helder, Assen, Amsterdam, Utrecht, Hellevoetsluis, Tilburg, Vlissingen en Maastricht . . . . 161—208

Afdeeling V. Uurwaarnemingen van den thermometer gedaan te Utrecht, Helder en Vlissingen en van den barometer gedaan te Helder, Groningen en Vlissingen, benevens overzichten dezer waarnemingen . 209—283

Afdeeling VI. Bijzondere waarnemingen.

A. Composanten van den wind te Utrecht . . . . 285—296

B. Wind voor 4 plaatsen in Nederland, (Groningen, Helder, Utrecht en Vlissingen) . . . . 297—299

TABLE DES MATIÈRES.

Page.

Liste des stations météorologiques des Pays-Bas v

Préface . . . . vii—viii

Observations faites dans les Pays-Bas en 1897, contenant:

Division I. Observations faites trois fois par jour à de Bilt, Groningue, Helder, Flessingue, Maestricht, Hellevoetsluis, Tilbourg et Winterswijk . . . . 1—96

Division II. Revues mensuelles des observations faites trois fois par jour à de Bilt, Helder, Leeuwarde, Groningue, Assen, Amsterdam, Oude-Wetering, Katwijk, Rotterdam, Hellevoetsluis, Flessingue, Oudenbosch, Tilbourg, Maestricht, Zutphen et Winterswijk . . . . 97—112

Division III. Observations pluviométriques dans ± 100 stations . . . 113—160

Division IV. Écarts du thermomètre à Groningue, Leeuwarde, Helder, Utrecht, Hellevoetsluis, Flessingue, Maestricht, Assen et Tilbourg et du baromètre à Delfzijl, Groningue, Leeuwarde, Helder, Assen, Amsterdam, Utrecht, Hellevoetsluis, Tilbourg, Flessingue et Maestricht. 161—208

Division V. Observations horaires du thermomètre, faites à Utrecht, Helder et Flessingue et du baromètre, faites à Helder, Groningue et Flessingue et résumés de ces observations . . . . 209—283

Division VI. Observations particulières.

A. Composantes du vent à Utrecht . . . . 285—296

B. Vent en 4 lieux des Pays-Bas (Groningue, Helder, Utrecht et Flessingue). 297—299

	Bladz.
C. Overzicht van de wêersgesteldheid gedurende het jaar 1897	300—319
D. Verschijnselen uit het planten- en dierenrijk en betreffende den landbouw	320—324
E. Jaaroverzicht.	325—340
Afdeeling VII. Aardmagnetische waarnemingen te Utrecht	341—370
Aanhangsel. Waarnemingen buiten Nederland hoofdzakelijk in 1897, bevattende:	
Waarnemingen gedaan te *Burnside*, Coronie, Kolonie Suriname (Zuid-Amerika), te *Paramaribo*, (Kolonie Suriname), te *Sommelsdijk*, (Kolonie Suriname), te *Groningen*, (Kolonie Suriname) en maandoverzichten van *Paramaribo*, *Sommelsdijk* en *Groningen*, en Waarnemingen uit den *Congo*, (*Dorp Meluna* aan de *Kwila-rivier* in het *Kwango-district*) in de jaren 1896 en 1897	I—LIV
Lijst van ingekomen boekwerken en tijdschriften in 1897	LV—LXII

	Page.
C. Revue du temps pendant l'année 1897.	300—319
D. Phénomènes périodiques des animaux, des végétaux et de l'agriculture.	320—324
E. Résumé	325—340
Division VII. Observations du magnétisme terrestre à Utrecht. . . .	341—370
Appendice. Observations faites à l'étranger en 1897, contenant:	
Observations faites à *Burnside*, Coronie, colonie du Surinam (Amérique du Sud), à *Paramaribo*, (colonie du Surinam), à *Sommelsdijk*, (colonie du Surinam), à *Groningue*, (colonie du Surinam) et revues mensuelles de *Paramaribo*, *Sommelsdijk* et *Groningue*, et Observations du *Congo* faites à la station de *Dorp Meluna* à la *rivière* la *Kwila* dans le *district* de *Kwango* dans les années 1896 et 1897	I—LIV
Liste des livres et ouvrages périodiques reçus en 1897	LV—LXII

VOORREDE.

Bij het verschijnen van het 49ste deel van dit Jaarboek dient slechts vermeld, dat de inrichting geheel dezelfde gebleven is, als die van den vorigen jaargang.

Van *Suriname* komen waarnemingen voor uit *Burnside*, *Paramaribo*, *Groningen* en *Sommelsdijk*. De waarnemingen zijn verricht door en onder toezicht van den Heer J. F. Pool.

Van den *Congo* komen waarnemingen voor uit *Dorp Meluna* aan de *Kwila-rivier* in het *Kwango-district*. Zij zijn verricht door den agent van de Nieuwe Zuid-Afrikaansche Vennootschap, den Heer W. F. P. Kiehl, onder directie van den Heer A. A. Gresshof.

Overigens raadplege men omtrent de inrichting van het Jaarboek hetgeen daaromtrent in de Inleiding van den 45sten Jaargang gezegd is.

Evenals de laatste jaren volgt hier een tabel met opgave der temperatuur-waarnemingen te 8 uren 's morgens op het NW-plat gedaan, vergeleken met die op hetzelfde uur, met het instrument, dat van oudsher voor de waarnemingen gediend heeft. Omtrent de ver-

PRÉFACE.

Ce 49e volume de l'Annuaire est, quant à son plan et sa distribution indentique au précédent.

Notre Colonie du *Surinam* y est représentée par les observations de *Burnside*, *Paramaribo*, *Groningue* et *Sommelsdijk*. Les observations sont faites par M. le pharmacien-militaire J. F. Pool et sous sa surveillance.

On y trouve encore des observations du *Congo* faites à la station de *Dorp Meluna* située à la *rivière* la *Kwila* dans le *district* de *Kwango*. Elles sont faites par l'attaché à la Nouvelle Société de Commerce de l'Afrique méridionale M. W-F-P. Kiehl, sous la direction de M. A-A. Gresshof.

Quant à l'arrangement de l'Annuaire on pourra consulter ce qui à été dit dans l'Introduction du 45e volume.

Ainsi que les derniers années, nous donnons ci-dessous une table des observations de température, faites à 8 heures du matin, sur la terrasse nord-ouest, comparées avec celles qui ont été faites à la même heure, avec le thermomètre dont on s'est servi depuis de longues

klaring der tabel en de beweegredenen tot het doen der waarnemingen, zie men de Voorrede van den 42sten Jaargang.

DE BILT, Juni 1900.

MAURITS SNELLEN.

années pour ces observations. Pour l'explication de cette table et les raisons qui nous ont porté à faire ces observations, nous renvoyons à la préface de la 42e année de l'Annuaire.

DE BILT, Juin 1900.

Het weer in deze maand bood, overeenkomstig de groote veranderingen in de verdeeling der luchtdrukking over West-Europa, veel verscheidenheid aan; alleen bleef de temperatuur meest, al kon niet van aanhoudende strenge vorst gesproken worden, beneden het vriespunt.

In den aanvang der maand was de luchtdrukking over Engeland laag en over Frankrijk hoog, waardoor de wind Zuid-Westelijk tot Zuid-Oostelijk was, en mistig, zwak vriezend weer, heerschte. Den 5^{den} verscheen evenwel een depressie ten Zuiden van Ierland, die zich naar Frankrijk voortbewoog, waarbij de wind tot het Oosten kromp en de vorst in 't Noorden van ons land in strengheid toenam, terwijl in 't Zuiden daarentegen meest dooiweer heerschte.

Den 14^{den} sloeg het weer om, daar een depressie over Scandinavië verscheen, die ten onzent Noordelijke winden met sneeuwbuien veroorzaakte. In de daaropvolgende week had weer een afwisseling van vorst en dooiweder plaats, totdat den 22sten door het ontstaan van een depressie over Noord-West Duitschland een ingrijpende verandering plaats

Dans ce mois, le temps présenta beaucoup de diversité, conséquence des grandes variations dans la répartition de la pression sur l'Europe occidentale; la température seule resta ordinairement au-dessous de zéro, quoiqu'on ne puisse parler d'un gel sévère continu.

Au commencement du mois, la pression atmosphérique était basse sur l'Angleterre, et haute sur la France, ce qui fit souffler un vent du sud-ouest au sud-est, et amena un temps brumeux avec une légère gelée. Le 5, cependant, il se présenta, au sud de l'Irlande, une dépression qui se dirigea vers la France; le vent tourna à l'est, et le gel devint plus sévère au nord de notre pays, tandis qu'au sud on eut généralement du dégel.

Le 14, le temps tourna à la suite d'une dépression qui se présenta sur la Scandinavie, et qui amena chez nous des vents du nord accompagnés de chute de neige. La semaine suivante, on eut de nouveau des alternatives de gel et de dégel, jusqu'à ce que, le 22, une dépression sur le nord-ouest de l'Allemagne amena un grand change-

vond. De depressie die zich langzaam Zuidwaarts voortbewoog, veroorzaakte stormachtigen Noord-Oostenwind met sneeuwval, welke zich den 23sten tot een hevigen sneeuwstorm bij vriezend weer ontwikkelde.

In de volgende dagen veroorzaakten depressies over Zuidelijk Scandinavië Noordenwind met sneeuwbuien en geringen vorst, wat tot den 31sten aanhield, toen een depressie, die ten Zuiden van ons land zich voortbewoog, een plotseling omslaan tot helder vriezend weer te weeg bracht, wat evenwel reeds in den avond in dooiweer overging.

In overeenstemming met deze weerstoestanden is het aantal sneeuwdagen (normaal 5.1) vrij groot, nl. 8; de hoeveelheid neerslag daarentegen gering (de helft van de normale hoeveelheid); de gemiddelde temperatuur beneden de normale en het aantal vorstdagen groot. In deze maand werden te Utrecht eenmaal een kring en eenmaal een krans om de zon en eenmaal een krans om de maan waargenomen.

FEBRUARI.

	Normaal voor de maand.	Waargenomen in deze maand.
Gemiddelde barometerstand	760.6 mM.	762.6 mM.
Hoogste „ den 16den	775.3 „	774.9 „
Laagste „ „ 2den	742.4 „	740.4 „
Gemiddelde temperatuur	3.°2 Cs.	3.°6 Cs.
Hoogste „ den 27sten	11.°0 „	10.°7 „
Laagste „ „ 16den	—4.°5 „	—6.°5 „
Gemiddelde betrekkelijke vochtigheid	86.2 %	90.6 %
Hoeveelheid verdampt water	22.9 mM.	30.2 mM.
„ gevallen „	44.4 „	44.2 „
Aantal dagen met neerslag	17	19
„ „ „ van 0.5 mM. of meer	12	13
Gemiddelde bewolking	6.3	6.9
Aantal bewolkte dagen	4.3	13
„ heldere „	2.0	2

ment. Cette dépression, qui se mouvait lentement vers le sud, fut la cause d'un violent vent du nord-est accompagné de neige, qui se transforma le 23 en une violente tempête de neige, accompagnée de gel.

Les jours suivants, des dépressions sur la Scandinavie méridionale amenèrent un vent du nord, accompagné de chute de neige et de gel faible; cela dura jusqu'au 31, où une dépression passant lentement au sud de notre pays fit tourner subitement le temps, qui devint clair, accompagné de gelée, suivie le même soir de dégel.

Cet état de l'atmosphère est cause que le nombre des jours de neige, 8, est assez grand; la normale est de 5.1; la quantité de pluie au contraire a été faible et seulement de la moitié de la moyenne; la température moyenne resta au-dessous de la normale et le nombre de jours de gelée fut grand. Dans ce mois, on observa à Utrecht, une fois un halo autour du soleil, une fois une couronne autour du soleil, et une fois une couronne autour de la lune.

Deze maand zette voor het Zuiden van ons land, onder den invloed eener depressie over Zuid-Engeland, met dooiweer in, terwijl in 't Noorden vorst en sneeuwval nog aanhielden.

Den 4den werd de wind bij stijgenden barometer Oostelijk en breidde zich de vorst over ons geheele land uit, waaraan evenwel reeds den 6den een depressie, die zich over 't Kanaal ontwikkelde en over ons land naar Midden-Duitschland trok, een einde maakte. Na het voorbijtrekken dezer depressie, die van sneeuw- en regenval vergezeld ging, volgde een korte periode van kouder weer, waarin spoedig een depressie, die den 9den bij Schotland verscheen, verandering bracht. De wind werd Zuid-Westelijk en het weer warmer en regenachtig.

Na eenige dagen van stil, betrokken of mistig weer, ontwikkelde zich den 15den een gebied van hooge luchtdrukking over ons land, waarbij het weer helder en koud werd en de temperatuur 's nachts verscheidene graden onder het nulpunt daalde, om evenwel des daags daarboven te stijgen. Onder den invloed evenwel eener depressie, die den 18den bij Schotland verscheen, werd de temperatuur weer hooger en het weer langzamerhand regenachtig.

Den 21sten trok een secundaire depressie benoorden ons land en veroorzaakte een Zuid-Westerstorm, die opgevolgd werd door een tijdvak van stil en mistig weer.

Den 25sten verscheen weder een depressie bij Schotland, die over geheel Noord-West Europa een krachtigen Zuid-Westelijken luchtstroom en temperatuursverhooging teweeg bracht. De laatste dagen van de maand waren bij meest geringe bewolking warm en stil.

In overeenstemming met het weinig uitgesproken karakter van deze maand, wijken de middelwaarden der verschillende elementen weinig van de normaalwaarden af. Alleen het aantal bewolkte dagen was vrij groot; terwijl ook de gemiddelde temperatuur 1°.5 boven de normale lag.

In de afgeloopen maand, werden in Utrecht éénmaal een krans om de zon en tweemaal een krans om de maan waargenomen.

Sous l'influence d'une dépression sur le sud de l'Angleterre, le mois commença par le dégel au sud de notre pays, tandis que le nord avait encore des gelées et de la neige.

Le 4, le baromètre montant, le vent tourna vers l'est, et la gelée s'étendit sur tout notre pays; le 6, cependant, une dépression qui se forma sur la Manche et traversa notre pays pour se diriger vers l'Allemagne centrale, fit cesser la gelée. Après le passage de cette dépression qui fut accompagnée de neige et de pluie, il y eut une courte période de temps froid, bientôt modifiée par une dépression qui se présenta le 9, près de l'Ecosse. Le vent passa au sud-ouest et le temps devint plus chaud et pluvieux.

Après quelques jours de temps calme, couvert ou brumeux, il se forma le 15 une aire de hautes pressions sur notre pays. Le temps devint clair et froid, et la température baissa pendant la nuit de plusieurs degrés au-dessous de zéro, pour remonter cependant au-dessus pendant le jour. Sous l'influence d'une aire de basses pressions qui apparut le 18 près de l'Ecosse, la température remonta et le temps devint peu à peu pluvieux.

Le 21, une dépression secondaire, passant au nord de notre pays, amena une tempête du sud-ouest, qui fut suivie d'une période de temps calme et brumeux.

Le 25, il se présenta de nouveau près de l'Ecosse, une dépression qui fit souffler un vent fort du sud-ouest sur tout le nord-ouest de l'Europe, et amena une élévation de température. Les derniers jours du mois furent, avec une faible nébulosité, chauds et calmes.

Le caractère peu prononcé de ce mois est cause que les valeurs moyennes des divers éléments météorologiques ne s'écartent guère de la normale. Le nombre des jours couverts seulement fut assez grand, et la température moyenne, de 1°.5 au-dessus de la normale.

Dans ce mois, on observa à Utrecht, une fois une couronne autour du soleil et deux fois autour de la lune.

De afgeloopen maand Maart droeg een stormachtig karakter. Een reeks van depressies trok uit het Westen langs ons land en veroorzaakte vooral in 't begin en het eind der maand storm- en regenweer.

Den 1sten brengt een depressie bij Schotland regenweer; den volgenden dag verergert het tengevolge van een uitlooper, die langs ons land trekt; in 't Noorden valt sneeuw. Den 3den beweegt zich met groote snelheid een stormcentrum uit Ierland benoorden ons land, en woedt een storm uit het Zuid-Westen. Terwijl het weer den 4den opklaart, verschijnt bij Ierland een nieuwe depressie, waardoor den 5den weer een krachtige Z.-Westenwind waait. Het heldere koude weer van den 6den, slaat den 7den bij het zich vormen van een depressie over Duitschland om in koud regenweer bij Noordenwind. Den 10den een nieuwe depressie met regenweer, den 12den eveneens. Deze laatste beweegt zich ZO.-waarts naar Frankrijk, waardoor de wind Oostelijk wordt en het weer opklaart.

Le mois de Mars a un caractère particulièrement orageux. Une suite d'aires de basses pressions venant de l'ouest et passant le long de notre pays, amenèrent, surtout au commencement et à la fin du mois, des tempêtes et un temps pluvieux.

Le 1er, une dépression près de l'Ecosse amène de la pluie; le jour suivant, un bras de cette dépression passant le long de notre pays rend le temps plus mauvais encore; dans le nord, il tombe de la neige. Le 3, un centre de tempête se meut avec une grande vitesse de l'Irlande au nord de notre pays, et cause une tempête du sud-ouest. Le 4, le temps s'éclaircit, mais, le 5, il souffle de nouveau un vent fort du sud-ouest, à la suite d'une nouvelle dépression près de l'Irlande. Le temps froid et clair du 6 se transforme, le 7, en temps pluvieux et froid, avec vent du nord, sous l'influence d'une dépression qui se forme sur l'Allemagne. Le 10, nouvelle dépression avec temps de pluie; le 12, de même. Cette dernière dépression se meut au sud-est, vers la France, de sorte que le vent devient est et que le temps s'éclaircit.

Den 15den weder regen tengevolge van een depressie boven Engeland; van den 18den tot den 20sten waait, onder den invloed eener zich van Schotland naar Scandinavië voortbewegende depressie, een stormachtige ZW.- tot NW.-wind.

Den 23sten is de ZW.-wind weer stormachtig, terwijl een uitlooper van een depressie boven Schotland over ons land trekt.

Den 24sten en 25sten weder hetzelfde; evenzoo den 27sten.

Den 28sten verschijnt een depressie bij Ierland, die benoorden ons land wegtrekt en een krachtigen Westerstorm op den 29sten veroorzaakt.

Het opklarende weer op den 30sten slaat den laatsten Maart weer in regenweer over, onder den invloed eener bezuiden ons land wegtrekkende depressie.

Overeenkomstig, dit voortdurende stormachtige en regenachtige weer, is de gemiddelde barometerstand beneden den normalen, daarentegen de gemiddelde temperatuur, en de hoeveelheid gevallen regen en het aantal bewolkte dagen boven de normale.

Le 15, il tombe de nouveau de la pluie, à la suite d'une dépression au-dessus de l'Angleterre; du 18 au 20, il souffle un vent de tempête allant du sud-ouest au nord-ouest, sous l'influence d'une dépression qui se meut de l'Ecosse vers la Scandinavie.

Le 23, un bras d'une dépression au-dessus de l'Ecosse passant sur notre pays y fait souffler un vent violent du sud-ouest.

Il en est de même le 24, le 25 et le 27.

Le 28, apparaît, près de l'Irlande, une dépression qui s'éloigne au nord de notre pays, et suscite, le 29, une forte tempête de l'ouest.

Le temps qui s'éclaircissait le 30, tourne le 31 de nouveau à la pluie, sous l'influence d'une dépression qui passe au sud de notre pays.

Conformément à ce temps orageux et pluvieux continuel, la hauteur barométrique resta au-dessous de la normale, tandis que la température moyenne, la hauteur de pluie tombée et le nombre des jours couverts s'élevèrent au-dessus de la normale.

Het eerste gedeelte der maand behield nog het ongunstige karakter van Maart. Den 1sten veroorzaakt eene depressie over 't Kanaal krachtigen ZW.-wind en regen; zij trok met regen en hagel naar Duitschland, waarbij de wind naar 't Noorden kromp. In de volgende dagen heerschte helder koud weer bij NO.-wind, onder invloed van depressies, die ten zuiden van ons wegtrokken. Den 8sten lag eene depressie over ons land en regende het; den volgenden dag klaarde het weer op, om den 10den weder door eene depressie over de Noordzee in regenweer om te slaan. Na eenige afwisselingen van buiïg en helder weer verscheen den 17den een storm-centrum bij Schotland, dat zich Oostwaarts voortbewoog en van den 17den tot den 19den een Zuid-Wester- tot Noord-Westerstorm veroorzaakte. Na opklaring trad den 20sten weer regenweer in, maar den 22sten ontwikkelde zich over Noord-Europa een gebied van hooge luchtdrukking; de wind werd NO., het weer helder en de temperatuur steeg. De betrekkelijk groote warmte der volgende dagen wordt den 27sten door onweders afgebroken. Den 28sten ging een vrij onregelmatige verdeeling van de luchtdrukking over West-Europa ook van onweders over ons land gepaard. De luchtdrukking nam af en depressies vertoonden zich bij Schotland, waardoor de wind ZW. werd, alhoewel het weer aan het einde der maand vrij gunstig bleef.

Tweemaal werd deze maand in Utrecht een kring, éénmaal een krans om de maan gezien, en éénmaal een kring om de zon.

La première partie du mois garda le caractère défavorable de Mars. Le 1er, une dépression qui se trouvait sur la Manche amena un vent frais du sud-ouest et de la pluie; cette dépression se dirigea, accompagnée de pluie et de grêle, vers l'Allemagne, tandis que le vent tourna au nord. Les jours suivants, sous l'influence de dépressions qui passèrent au sud de notre pays, le temps devint froid et clair par un vent du nord-est. Le 8, une aire de basses pressions se trouvait sur notre pays et il pleuvait; le lendemain, le temps s'éclaircit; le 10, une dépression sur la mer du Nord ramena la pluie. Après quelques alternatives de temps pluvieux et de temps clair, ils se présenta, près de l'Ecosse, un centre de tempête, qui se dirigea vers l'est et occasionna une tempête du sud-ouest au nord-ouest. Après un court éclaircissement, le temps se remit à la pluie, le 20. Le 22, une aire de hautes pressions se forma sur le nord de l'Europe; le vent devint nord-est, le temps clair, et la température monta. La température relativement grande des jours suivants, fut interrompue le 27 par des orages. Le 28, une répartition assez irrégulière de la pression sur l'Europe occidentale, fut aussi accompagnée d'orages dans notre pays. La pression atmosphérique diminua, et des dépressions se présentèrent de nouveau près de l'Ecosse, ce qui amena un vent du sud-ouest, quoique le temps restât assez bon à la fin du mois.

Dans ce mois, on observa à Utrecht, une fois un halo et une fois une couronne autour de la lune; une fois un halo autour du soleil.

Op twee dagen daalde de temperatuur beneden 0° C en op één dag steeg zij boven 25° C. Het begin der maand Mei kenmerkte zich door schraal weder, terwijl herhaaldelijk ondiepe depressies elkander opvolgden. Na 14 Mei werd het weder beter, tengevolge van den invloed van een gebied van hooge drukking, dat tot 26 Mei boven Europa stand hield. Daarna daalde de barometer over geheel Europa, zoodat het weder toch vrij goed bleef.

In deze maand kwamen drie tijdvakken van helder warm weer voor, die van elkaar gescheiden waren door twee van koud regenachtig weer.

Gedurende het eerste tijdvak is de luchtdrukking ten Noorden van Schotland hoog, de wind Oostelijk en de temperatuur hoog. Den 4den ontwikkelde zich een vlakke depressie over Oost-Europa, waardoor de wind Noordelijk werd en de hemel zich bedekte.

Den 9den strekt zich een depressiegebied van Ierland tot Italië uit, dat zich met regenval naar Oost-Europa voortbeweegt. De luchtdrukking wordt daarna in onze streken weder hoog en den 11den treedt het tweede tijdvak van helder warm weer in.

Den 15den evenwel verschijnt een depressie ten Westen van Ierland, die den 16den boven Schotland ligt en bij welker nadering de hemel betrekt. Terwijl ze zich verder naar de Noorsche kust voortbeweegt, is het weer koud en buiïg.

Den 17den wordt ze door een tweede depressie gevolgd, die evenwel Zuidelijker over ons land trekt en Vrijdag den 19den een hevigen Wester-

Ce mois présenta trois périodes de temps clair et chaud, séparées les unes des autres par deux périodes de temps froid et pluvieux.

Pendant la première période, la pression atmosphérique au nord de l'Ecosse est haute, le vent est est, et la température haute. Le 4, une dépression uniforme s'étend sur l'Europe orientale, le vent devient nord, et le ciel se couvre.

Le 9, une aire de basses pressions, qui s'étend de l'Irlande à l'Italie, se meut, accompagnée de pluie, vers l'Europe orientale. La pression atmosphérique redevient haute chez nous, et la seconde période de temps chaud commence le 11.

Le 15, cependant, se présente, à l'ouest de l'Irlande, une dépression qui se trouve le 16 au-dessus de l'Ecosse, et à l'approche de laquelle le ciel se couvre. Pendant qu'elle se meut vers la côte de la Norwège, le temps est froid et orageux.

Le 17, cette dépression est suivie d'une autre, qui se dirige cependant plus au sud, par dessus notre pays, et y cause, le vendredi 19,

storm veroorzaakt. In de volgende dagen blijft het weer onder den invloed van depressies over Engeland en Schotland, koud en buiïg, tot den 22sten zich een gebied van hooge luchtdrukking van uit Frankrijk over Centraal-Europa ontwikkelt en het weer helder en warm wordt.

Den 24sten en 25sten brengen vlakke depressies over de Kanaalstreek, onweders, evenzoo den 27sten en 29sten.

De gemiddelden der elementen verschillen maar weinig van de normaal-waarden, alleen is de maand 1° à 2° te warm en de verdamping zeer groot geweest.

Het weer was in het eerste gedeelte van de maand regenachtig, in het laatste meer helder en warmer.

Den 1sten en 2den was onder den invloed van een zwakke depressie over Frankrijk de wind Noordelijk; den 3den werd hij, bij het verschijnen

une violente tempête d'ouest. Les jours suivants, le temps resta froid et orageux, sous l'influence de dépressions au-dessus de l'Angleterre et de l'Ecosse, jusqu'à ce que, le 22, une aire de hautes pressions s'étendit de la France sur l'Europe centrale, et le temps devint clair et chaud.

Le 24 et le 25, des dépressions uniformes sur la Manche amenèrent des orages; il en fut de même le 27 et le 29.

Les moyennes des éléments météorologiques s'écartent peu de leur valeur normale; le mois fut seulement de un à deux degrés trop chaud, et l'évaporation fut très forte.

Dans la première partie du mois, le temps fut pluvieux; ensuite, il fut plus clair et plus chaud.

Sous l'influence d'une faible dépression sur la France, le vent soufila du nord, le 1er et le 2; l'apparition d'une dépression près de l'Ecosse

van een depressie bij Schotland, Westelijk en was het weer bewolkt en koud. Terwijl de depressie over Midden-Scandanavië wegtrok, waaide den 4den een krachtige NW. wind bij buiïg weer. Een nieuwe depressie deed den 5den den wind weer krimpen en veroorzaakte den 6den en 7den bij krachtigen ZW.-wind regenweer. Den 8sten klaarde het weer op, om evenwel den 9den onder den invloed eener nieuwe depressie bij Schotland opnieuw in regenweer om te slaan. Den 10den weder verandering, waarna het weer bij hoogen barometerstand helder en warm bleef, tot den 15den de wind, na eerst Oostelijk geweest te zijn, Noordelijk werd en de temperatuur weer daalde. Den 20sten verscheen eene depressie over 't Kanaal, die zich langs ons land bewoog en den 20sten en 21sten onweders bracht. Den 22sten werd de wind NW., en den 23sten was hij, tengevolge eener depressie boven Jutland, in 't Noorden van ons land krachtig en 't weer buiïg.

Den 24sten steeg de barometer weer en was de wind zwak, daarentegen den 25sten en 26sten krachtig Z., onder den invloed eener depressie bij Schotland. De bewolking bleef gering, de temperatuur boven de normale. Den 27sten trokken onweders over ons land, waarna de barometer steeg en de wind gedurende 't laatste gedeelte van de maand Noordelijk was, bij vrij normale temperatuur.

Den 18den werd te De Bilt een kring om de zon waargenomen.

le fit tourner à l'ouest, et l'on eut un temps couvert et froid. Lorsque cette dépression s'éloignait par dessus le centre de la Scandinavie, il souffla, le 4, un vent fort du nord-ouest, accompagné d'ondées le 5; une nouvelle dépression fit de nouveau tourner le vent et amena le 6 et le 7 un temps de pluie, avec un fort vent du sud-ouest. Le 8, le temps s'éclaircit de nouveau, mais la pluie recommença à tomber le 9, sous l'influence d'une nouvelle dépression près de l'Ecosse. Le 10, nouveau changement, après quoi le temps resta clair et chand, par un haut niveau barométrique, jusqu'à ce que, le 15, le vent, qui avait d'abord soufflé de l'est, devint nord, et la température baissa de nouveau. Le 20, une dépression se présenta sur la Manche; elle se déplaça le long de notre pays, et y amena, le 20 et le 21, des orages. Le 22, le vent devint nord-ouest; le 23, il souffla avec force dans le nord de notre pays, et le temps fut orageux par suite d'une dépression sur le Jutland.

Le 24, le baromètre remonta, et le vent fut faible; en revanche, il souffla avec force du sud, le 25 et le 26, sous l'influence d'une dépression près de l'Ecosse. La nébulosité resta faible, et la température fut au-dessus de la normale. Le 27, des orages passèrent sur notre pays, après quoi le baromètre monta et le vent souffla du nord pendant le reste du mois, tandis que la température fut assez normale.

Le 18, on vit au Bilt un halo autour du soleil.

Dans les premiers jours du mois, une aire de hautes pressions se meut de l'ouest sur nos contrées; le temps est chaud et clair. Le vent tournant du nord au sud-est, la température monte, et atteint son maximum le 5. Une dépression se présente le 4, près de l'Irlande, et, du 5 au 6, des orages passent sur notre pays. Le vent devient sud-ouest, et le temps s'éclaircit pour redevenir orageux, le 8, sous l'influence d'une nouvelle dépression sur l'Angleterre. Cette dépression passant au nord de notre pays, y fait souffler, le 8, un vent fort du nord-ouest. Jusqu'au 15, le temps reste chaud, par un vent du sud-ouest au nord-ouest et une nébulosité variable; puis, une dépression secondaire passe de la Manche sur notre pays et y amène des orages avec des averses. La pression atmosphérique reste basse sur l'Angleterre; le vent vient par conséquent du sud et est assez fort; le 19, des orages passent sur notre pays. Dans les jours suivants aussi, une dépression passe sur l'Ecosse, et le vent reste sud-ouest. Le 22, il y a de nouveau des orages. Le 24, une nouvelle dépression apparaît au

verschijnt een depressie ten Noorden van Ierland, die den 25sten langs ons land trekt en van onweders vergezeld is. Een nieuwe depressie verschijnt bij Ierland, waardoor de wind Z.-Westelijk blijft en het weer bij gedeeltelijke bewolking iets warmer en stil is. Den 29sten vertoont zich weder een depressie bij Ierland, die zich naar Schotland voortbeweegt en den 31sten stormachtigen Westelijken wind en 's avonds buiïg weer en onweders veroorzaakt.

De maand treedt in bij stormachtigen ZW.-wind en onweer, onder den invloed eener depressie over 't Skagerak, terwijl een andere zich ten W. van Ierland vertoont en den 2^{den} de Noordzee bereikt, waardoor de stormachtige ZW.-wind en 't buiïge weer aanhoudt. Bij 't wegtrekken van deze depressie over Scandinavië klaart 't weer op, maar wordt daarna bij 't verschijnen eener depressie bij Schotland opnieuw koud en buiïg. Den 4^{den} en 5^{den} trekken dan talrijke onweders, van slagregens

nord de l'Irlande, qui passe, le 25, le long de notre pays, et est accompagnée d'orages. Une nouvelle dépression se présente près de l'Irlande, de sorte que le vent reste sud-ouest, et que le temps est calme et un peu plus chaud, avec un ciel en partie nuageux. Une nouvelle aire de basses pressions se présente de nouveau près de l'Irlande; elle se dirige vers l'Ecosse, et amène, le 31, un vent de tempête de l'ouest, et, le soir, un temps orageux et des orages.

Le mois, sous l'influence d'une dépression sur le Skagerrak, commence par une tempête du sud-ouest accompagnée d'orage; une autre aire de basses pressions, qui se présente en même temps à l'ouest de l'Irlande, atteint, le 2, la mer du Nord, de sorte que la tempête du sud-ouest continue, et que le temps reste orageux. Lorsque cette dépression passe sur la Scandinavie, le temps s'éclaircit, mais redevient froid et orageux, à l'apparition d'une dépression près de l'Ecosse. Le

en hagelslag vergezeld, over ons land. Te De Bilt viel in deze 2 etmalen 51.4 mM. regen,

Terwijl het depressiegebied NO.-waarts wegtrekt, ruimt de wind en klaart het weer bij buien op; de temperatuur blijft laag. Den 9den wordt de wind door een zwakke depressie over Noord-Frankrijk Oostelijk.

Den 10den komen wij onder het gebied van hooge luchtdrukking over Engeland, waardoor bij NO.-wind helder weer heerscht en de temperatuur een weinig stijgt. Dit houdt aan tot den 16den, wanneer de depressie in 't Noorden zijn gebied ook over de Noordzee uitbreidt en het weer bij ZZW.-wind betrekt. Den 17den neemt dit toe en trekken onweders over ons land. Van den 18den tot den 19den trekt een depressie over ons land, van matigen regenval vergezeld; de wind wordt daarna NW. en het weer buiïg en koud. Den 21sten slaat het weer om, en waait onder den invloed eener depressie over het Skagerak een stormachtige ZW.-wind bij regenachtig weer; 't weer klaart daarna op en de temperatuur stijgt. Den 24sten waait het opnieuw hard uit 't ZW., maar den 25sten klaart het weer op en den 26sten reeds heerscht stil, helder en warm weer, doordat het gebied van hooge luchtdrukking over Centraal-Europa zich ook over onze streken uitbreidt. Eerst den 30sten slaat het weer om en trekt eene depressie, van onweders vergezeld, over ons land.

4 et le 5, de nombreux orages, accompagnés d'averses et de chute de grêle, passent sur notre pays. Dans ces deux jours, on recueillit au Bilt 51.4 mm. de pluie.

Pendant que l'aire de basses pressions s'éloigne vers le nord-est, le vent devient plus favorable, et le temps s'éclaircit peu à peu; la température reste basse. Une faible dépression sur le nord de la France fit tourner le vent à l'ouest.

Le 10, nous sommes sous l'influence de l'aire de hautes pressions qui s'étend sur l'Angleterre; le vent est nord-est, le temps est clair et la température monte un peu. Cela reste ainsi jusqu'au 16, où une dépression au nord s'étend aussi sur la mer du Nord; le temps se couvre alors par un vent du sud-sud-est. Cette influence augmente le 17, et des orages éclatent dans notre pays. Du 18 au 19, une aire de basses pressions, accompagnée d'une pluie modérée, passe sur notre pays; le vent tourne ensuite au nord-ouest, et le temps devient orageux et froid. Le 21, le temps change de nouveau, et sous l'influence d'une dépression sur le Skagerrak, on a un vent de tempête du sud-ouest, avec temps pluvieux; le temps s'éclaircit ensuite, et la température monte. Le 24, le vent souffle de nouveau très fort du sud-ouest, mais le lendemain le temps se remet, et le 26 fut serein et chaud, l'aire de hautes pressions qui se trouvait sur l'Europe centrale, s'étendant aussi sur notre pays. Le 30 seulement, le temps change, et une aire de basses pressions, accompagnée d'orages, passe sur notre pays.

OCTOBER.

Het weer was gedurende de eerste helft van de afgeloopen maand onder den invloed van betrekkelijk zwakke depressies, gedurende de tweede helft van een gebied van hooge luchtdrukking.

Den 1sten October is het weer, na onweders en hagelslag, opklarend, den volgenden dag is de hemel bij N.-wind betrokken. Den 3den verschijnt een depressie boven de Noordzee, die over ons land naar Midden-Duitschland trekt en grooten regenval met van Z. tot N. ruimenden wind veroorzaakt. Daarna wordt 't weer bij Oostenwind onder den invloed van een gebied van hooge luchtdrukking over Denemarken koud en helder, totdat den 8sten bij Schotland een depressie verschijnt, waardoor de wind weer ZW. en de hemel betrokken wordt. Den 11den is de wind krachtig W.; den 12den NW. en 't weer buiïg en koud.

Den 14den is de wind onder den invloed van een gebied van hooge luchtdrukking over Midden-Duitschland Z. en 't weer opklarend, en den 15den helder en warm. Den 16den veroorzaakt een depressie van Ierland

Dans la première partie du mois, le temps fut sous l'influence de dépressions relativement faibles, tandis que, dans la seconde moitié, il fut sous l'influence d'une aire de hautes pressions.

Après des orages et de la grêle, le temps s'éclaircit le premier Octobre; le jour suivant, par un vent du nord, le ciel est couvert. Le 3, une dépression se présente sur la mer du Nord; elle passe sur notre pays et, se dirigeant vers l'Allemagne centrale, amène une grande chute de pluie et un vent qui passe du sud au nord. Puis, par un vent d'est, le temps, sous l'influence d'une aire de hautes pressions sur le Danemark, devient clair et froid. Le 8, une dépression apparaît près de l'Ecosse, le vent redevient sud-ouest, et le ciel se couvre. Le 11, il souffle un vent fort d'ouest; le 12, du nord-ouest, le temps est orageux et froid.

Le 14, sous l'influence d'une aire de hautes pressions sur l'Allemagne centrale, le vent est sud, le temps s'éclaircit; le 15, le temps est clair et chaud. Le 16, une dépression sur l'Irlande amène encore un temps

nog regenachtig weer, maar den 17den begint het gebied van hooge luchtdrukking over Centraal-Europa zich Westwaarts uit te strekken en vangt de periode van helder weer aan, alleen den 19den door geringen regenval (door een vlakke depressie veroorzaakt) onderbroken. De wind is den 20sten NW., en ruimt daarna tot Oosten- en verder tot Zuidenwind; de temperatuur is 's morgens bij mistig weer vrij laag, 's middags daarentegen betrekkelijk hoog.

Te De Bilt werd éénmaal een kring om de zon en driemaal een om de maan waargenomen.

pluvieux, mais, le 17, l'aire de hautes pressions sur l'Europe centrale commence à s'étendre vers l'ouest, et la période de temps clair commence, interrompue seulement, le 19, par une petite pluie, causée par une dépression uniforme. Le 20, le vent est nord-ouest; puis tourne à l'est et enfin au sud; le matin, par un temps brumeux, la température est assez basse, mais en revanche, relativement haute dans l'après-midi.

Au Bilt, on vit une fois un halo autour du soleil et trois fois un halo autour de la lune.

Het tijdvak van stil, vaak mistig weer, zonder regenval van eenig beteekenis en bij hooge barometerstanden, den 16den October ingetreden, eindigde eerst den 26sten November met een plotselingen omslag tot stormweer.

Gedurende de eerste dagen der maand heerscht mistig koud weer bij

La période de temps calme, souvent accompagné de brouillard, sans pluie de quelque importance, qui commença le 16 Octobre, ne finit que le 26 Novembre, par un temps subit de tempête.

Dans les premiers jours du mois, on eut un temps brumeux et

zwakken Oostenwind; den 6^{den} veroorzaakt een zeer vlakke depressie geringen regenval, waarna het weer opklaart en de wind ZO. wordt. Onder den invloed eener depressie bij Schotland ruimt de wind gedurende de volgende dagen tot ZW., terwijl de bewolking gering is, en de temperatuur stijgt.

Daarna daalt de barometer onder den invloed eener depressie, die zich den 15^{den} als een stormcentrum over het Skagerak vertoont, terwijl een uitlooper over ons land regenweer brengt. Het weer klaart aanstonds weer op, en is verder bij Z.- tot W.-wind vooral 's morgens mistig. Den 19^{den} komt een storm in N.-Scandinavië, die in ons land alleen den matigen wind tot NNW. doet ruimen, terwijl het weer mistig blijft. Gedurende een tweeden storm, die over Scandinavië heentrekt, blijft het weer bij zwakken ZW.-wind mistig. Daarna wordt de wind NO. en O. en daalt de temperatuur die den 26sten, terwijl de wind ZO. en de hemel helder wordt, tot 8° onder het vriespunt zinkt. Een depressie evenwel, die bij Schotland is verschenen doet den wind verder tot ZW. ruimen en de temperatuur stijgen, terwijl reeds op den avond van den 26sten bij aanwakkerenden wind sneeuw- en regenweer intreedt. Den 29sten verschijnt een zeer diepe depressie bij Schotland, die in Oostelijke richting over Denemarken naar Rusland trekt en den 28sten een Z.-Westerstorm — met onweer, — den 29sten een N.-Westerstorm veroorzaakt. Zij wordt op den voet door een tweede depressie gevolgd, die den 30sten een Z.-Westerstorm geeft.

In aansluiting met deze weersgesteldheid is de gemiddelde barometerstand bijzonder hoog, (in de laatste 48 jaar slechts tweemaal overtroffen, 1867 : 766.8; 1889 : 766.4) en het aantal dagen met mist, 21, zeer groot.

Te De Bilt werd tweemaal een kring om de zon, eenmaal een krans om de zon en 5 maal een kring om de maan waargenomen.

froid, par un vent d'est faible; le 6, une dépression très uniforme amène un peu de pluie, après quoi le temps s'éclaircit, et le vent devient sud-est. Dans les jours suivants, le vent tourne au sud-ouest sous l'influence d'une dépression près de l'Ecosse, tandis que la nébulosité est faible et que la température monte.

Le baromètre baisse ensuite sous l'influence d'une dépression qui se présente le 15, comme un centre de tempête sur le Skagerrak, tandis qu'un bras de cette dépression amène chez nous de la pluie. Le temps s'éclaircit tout de suite de nouveau et reste brumeux, surtout le matin, par un vent du sud à l'ouest. La 19, une tempête qui règne sur le nord de la Scandinavie n'a d'autre effet que de faire tourner au nord-nord-est le vent qui est modéré, tandis que le temps reste brumeux. Pendant une seconde tempête qui passe sur la Scandinavie, le temps reste brumeux par un vent du sud-ouest; puis le vent tourne au nord-est et à l'est, et la température baisse. Le 26, le vent tournant au sud-est et le ciel devenant clair, le thermomètre descend jusqu'à 8° au-dessous de zéro; une dépression cependant, qui est apparue près de l'Ecosse, fait revenir le vent au sud-ouest et monter la température, tandis que dans la soirée du 26 déjà, par un vent fraîchissant, un temps de neige et de pluie commence. Le 29, se présente une profonde dépression près de l'Ecosse; elle se dirige à l'est, passant par dessus le Danemark vers la Russie; elle cause dans notre pays, le 28, une tempête du sud-ouest accompagnée d'orage et, le 29, une tempête du nord-ouest. Elle est immédiatement suivie d'une seconde dépression, qui amène, le 30, une tempête du sud-ouest.

D'accord avec ces circonstances atmosphériques, la hauteur barométrique moyenne a été particulièrement haute, et n'a été dépassée que deux fois dans les 48 dernières années: 766.8 mm. en 1867 et 766.4 en 1889; le nombre des jours de brouillard, 21, fut aussi très grand.

Au Bilt, on vit deux fois un halo, une fois une couronne autour du soleil et cinq fois un halo autour de la lune.

Nadat een storm-centrum benoorden ons land is weggetrokken, treedt de maand in bij afnemenden W.-wind en regenachtig weer. Den 1sten trekt nog een onweer over ons land, maar daarna begint de barometer te stijgen, wordt de wind NO. en het weer helder en koud met nachtvorst. Den 5^{den} betrekt het bij het verschijnen van een depressie bij Schotland, die den 6^{den} haar gebied over W.-Europa uitbreidt, en den wind Z. en 't weer warm en mistig maakt. Een secundaire depressie trekt met krachtigen wind en regen over ons land. Na een korte opklaring op den 7^{den}, verschijnt een uitgebreide depressie bij Schotland, die den 8sten overal storm en regenweer veroorzaakt. Den 9^{den} is het nog bij krachtigen ZW.-wind buiïg en koud, maar den 10^{den} klaart het weer op, om evenwel dadelijk weer om te slaan. Een secundaire depressie trekt den 10^{len} met storm en sneeuwval over ons land. Na opklaring heerscht den 14^{den} en 15^{den} weer krachtige ZW.-wind en warm regenweer. Den 16^{den} klaart het op en vangt een tijdperk van helder weer bij hoogen barometerstand aan. Tot den 20sten is de hoogste

Après qu'un centre de tempête, passant au nord de notre pays, s'est éloigné, le mois commence par un temps pluvieux et un vent d'ouest qui diminue en force. Le 1er, il passe encore un orage sur notre pays, puis le baromètre commence à monter; le vent passe au nord-est, et le temps devient clair et froid avec gelée pendant la nuit. Le 5, le temps se couvre à la suite d'une dépression près de l'Ecosse, qui s'étend, le 6, sur l'Europe occidentale, fait tourner le vent au sud et rend le temps chaud et brumeux. Une dépression secondaire, accompagnée de pluie et d'un vent fort, passe sur notre pays. Le temps s'éclaircit le 7, mais une grande aire de basses pressions qui se présente près de l'Ecosse, amène partout, le 8, un temps de tempête et de pluie. Le 9, le temps est encore orageux et froid par un vent fort du sud-ouest; le 10, le temps s'éclaircit, mais pour changer tout de suite. Une dépression secondaire, accompagnée de tempête et de neige, passe, le 10, sur notre pays. Le 14 et le 15, il souffle de nouveau un vent fort du sud-ouest; le temps est chaud et pluvieux. Le 16, le ciel s'éclaircit,

luchtdrukking over Midden-Europa en Engeland, en het weer ten onzent warm. Daarna evenwel ligt de hoogste luchtdrukking meer Noordelijk van ons, waarbij de wind oostelijk is en vorst intreedt.

Een depressie, die den 25sten Schotland nadert, maakt den 27sten aan den vorst een snel eind; de wind is reeds den 26sten zuidelijk geworden. Van den 28sten tot den 30sten gaat over geheel West-Europa een stormachtige ZW.-luchtstrooming en eerst den 31sten neemt de wind in kracht af en klaart het weer op.

Te De Bilt werden om de zon tweemaal een kring en éénmaal een krans, om de maan éénmaal een kring en tweemaal een krans waargenomen.

Zooals uit bovenstaande samenstelling van de opvolgende weerstoestanden in 1897 blijkt, droeg dit jaar een eenigszins abnormaal karakter; naast een groot aantal van stormen kwam een tijdperk van aanhoudende hooge barometerstanden, dat van 16 October tot 26 November duurde, voor.

et une période de temps clair, par de grandes hauteurs barométriques, commence. Jusqu'au 20, la plus haute pression atmosphérique se trouve sur l'Europe centrale et l'Angleterre, et il fait chaud chez nous. Après, cependant, la plus haute pression atmosphérique se trouve au nord de notre pays, le vent devient est, et le gel commence.

Une dépression qui s'approche de l'Ecosse, le 26, met, le 27, une fin rapide à la gelée; le 26 déjà le vent était devenu sud. Du 28 au 30, une tempête du sud-ouest souffle sur toute l'Europe occidentale; le 31 seulement, le vent diminua en force et le temps s'éclaircit.

Au Bilt, on vit, autour du soleil, deux fois un halo et une fois une couronne; autour de la lune, une fois un halo et deux fois une couronne.

Ainsi qu'on peut le voir ci-dessus, l'état consécutif du temps en 1897 donne à cette année un caractère quelque peu anomal; à côté d'un grand nombre de tempêtes, il se présente une période continue de hautes pressions, qui dura du 16 Octobre au 26 Novembre.

Januari was een maand van voortdurend lage temperatuur, zonder bepaald strengen vorst. Merkwaardig was de tegenstelling tusschen het Noorden van ons land, waar de temperatuur eenige graden onder het vriespunt bleef, en het Zuiden waar dooiweer heerschte. Van den 5^den^ tot den 14^den^ heerschte strengere vorst; den 23sten een hevige sneeuwstorm. In de eerste helft van Februari vroor en dooide het bij afwisseling en eerst den 18^den^ trad de definitieve dooi in, de laatste dagen van die maand, na een korten Z.-Westerstorm op den 21sten, waren helder en warm. Maart was bij uitstek een stormachtige maand. Den 3^den^ woedde een Z.-Westerstorm, daarna bleef het buiïg weer, en van den 20sten tot den 29sten was een tijdperk van aanhoudend stormachtig weer; den 29sten woedde zelfs een hevige Z.-Westerstorm. In April bleef het nog koud en buiïg, en van den 17^den^ tot den 19^den^ woei de laatste voorjaarsstorm, die opgevolgd werd door warm, helder zomerweer met onweders op den 27sten en 29sten. De eerste helft van Mei was koud, gedurende de laatste helft was het weer evenwel gunstiger; ook Juni was over 't algemeen warm, alleen tweemaal door regenachtig koud weer afgewisseld. Een hevige Westerstorm op den 19^den^ was het gevolg van een depressie, die over ons land trok en ook in 't buitenland schade aanrichtte (hoos Parijs).

In 't laatste gedeelte der maand woedden talrijke onweders.

Juli was vrij afwisselend van karakter, met veel onweders; van den 13^den^ tot den 15^den^ was het vrij warm. De temperatuur was gedurende de eerste helft van Augustus hoog; verder was het weer afwisselend. Ultimo Augustus woei een stormachtige Westelijke wind met buien en onweers. Ook het begin van September kenmerkte zich door stormachtigen wind, buiïg weer en talrijke onweders. Vooral den 4^den^ en 5^den^ vielen regen en hagel in overmaat (te De Bilt viel in deze twee etmalen 51.4 mM.). Na een tijdperk van helder warm weer werd het tot den 26sten opnieuw buiïg met onweders. Nadat den laatsten September onweders over ons land waren getrokken, en het den derden October zwaar geregend had, nam het weer een rustiger karakter aan, eerst nog door een paar buiïge dagen afgebroken. Den 16^den^ begon de barometer te stijgen, en werd het weer helder en warm; wel regende het den 19^den^, maar van weinig beteekenis. Verder was het meest mistig, stil en koud. De barometer bleef onafgebroken een hoogen

La température fut continuellement basse en Janvier, sans cependant que le gel fût fort. Il est remarquable qu'au nord de notre pays la température resta de plusieurs degrés au-dessous de zéro, tandis qu'au sud il dégelait. Du 5 au 14, le gel fut plus sévère; le 23, on eut une violente tempête accompagnée de neige. Dans la première moitié de Février, il y eut des alternatives de gel et de dégel, et ce ne fut que le 18 que le dégel s'établit définitivement. Les derniers jours du mois furent sereins et chauds après une courte tempête du sud-ouest. Le mois de Mars fut un vrai mois de tempêtes. Le 3, il y eut une tempête du sud-ouest; après, le temps resta orageux, et la période du 20 au 29 fut tempêtueuse; le 29 même, on eut une violente tempête du sud-ouest. En Avril, le temps resta encore froid et orageux; la dernière tempête du printemps, qui régna du 17 au 19, fut suivie d'un temps d'été chaud et clair, accompagné d'orages le 27 et le 29. La première moitié du mois de Mai fut froide; la seconde moitié fut cependant plus favorable; en Juin, le temps fut en général chaud, interrompu deux fois seulement par un temps pluvieux et froid. Une violente tempête de l'ouest, qui éclata le 19, fut la conséquence d'une dépression qui passa sur notre pays et exerça aussi des ravages à l'étranger (trombe à Paris).

De nombreux orages éclatèrent dans la dernière partie du mois.

Le temps en Juillet fut assez variable, avec beaucoup d'orages; du 13 au 15, il fit assez chaud. Dans la première moitié du mois d'Août, la température fut haute; puis le temps devint variable. Un vent violent d'ouest, accompagné d'averses et d'orage, souffla le dernier jour de ce mois. Le commencement du mois de Septembre fut aussi caractérisé par un vent tempêtueux, des averses et de nombreux orages. Le 4 et le 5 surtout, il tomba partout de la pluie et de la grêle en abondance; au Bilt, il en tomba 51.4 mm. dans ces deux jours. Après une période de temps chaud, le temps devint, jusqu'au 26, de nouveau mauvais et orageux. Après que des orages eurent passé, le 30, sur notre pays et après une grande chute de pluie, le 3 Octobre, le temps devint plus calme, interrompu encore par une couple de jours de pluie. Le 16, le baromètre commença à monter, et le temps devint clair et chaud; il plut, il est vrai, le 19, mais ce fut de peu d'importance. Ensuite le temps devint brumeux, calme et froid. Le niveau

stand aanwijzen, tot hij den 26sten November begon te dalen, waarbij het weer helder en zeer koud werd, om 's avonds al in dooiweer met sneeuwval over te gaan. De wind wakkerde sterk aan, en den 28sten woei een Z.-Wester-, den 29sten een Noord-Westerstorm, den 30sten nog een Z.-Westerstorm met onweders.

Ook de eerste helft van December, voornamelijk tusschen den 6den en 16den, droeg een stormachtig karakter, vooral den 8sten en 10den stormde het. Daarna trad helder vriezend weer in, waaraan den 27sten door een snelle dooi een eind werd gemaakt, en met drie stormachtige dagen eindigde het jaar.

barométrique resta continuellement haut. Le 26 Novembre, il commença à baisser; le temps devint clair et très froid, mais le soir il tomba de la neige et le thermomètre remonta au-dessus de zéro. Le vent fraîchit beaucoup; le 28, on eut une tempête du sud-ouest; le 29, une tempête du nord-ouest et, le 30, une du sud-ouest, accompagnée d'orage.

La première moitié de Décembre eut un caractère orageux, principalement entre le 6 et le 16, et surtout le 8 et le 10. Puis on eut un temps clair et du gel, auquel, le 27, un dégel rapide mit fin. L'année finit avec trois jours de tempête du sud-ouest.

D. VERSCHIJNSELEN UIT HET PLANTEN- EN DIERENRIJK EN BETREFFENDE DEN LANDBOUW.

Décembre.

Muggenzwermen gezien (*Culex pipiens voltigent par essaims*). St. Jac. Parochie 17.

E. JAAROVERZICHT.

1897.

Voor de inrichting en verklaring der hiervolgende tabellen wordt verwezen naar de inleiding van het Jaarboek 1893.

Tabel **A.** De temperatuur te Utrecht was gemiddeld over 1897 slechts 0.04 graden Celsius beneden de normale. Evenals zijn beide voorgangers, was dit jaar dus weder te koud. Vooral hebben daartoe de maanden Januari en September medegewerkt. Maart en Juni waren daarentegen zeer warm. De herfstmaanden waren alle te koud.

De luchtdrukking was zes maanden boven en zes maanden beneden de normale. Gemiddeld was zij 0.30 mM. te hoog, voornamelijk door de zeer hooge standen in October en November; Maart gaf door hare groote negatieve afwijkingen eenige compensatie. Ook Augustus werkte, met eene voor een zomermaand vrij groote negatieve afwijking, daartoe mede. Evenals bij de temperatuur, ving het jaar aan met negatieve en eindigde met positieve afwijkingen.

E. APERÇU ANNUEL.

Nous renvoyons à l'introduction de l'Annuaire de 1893 pour l'explication et l'arrangement des tableaux qui suivent.

Table **A.** La température moyenne à Utrecht en 1897, ne fut que de 0.04 degré centigrade au-dessous de la normale. Cette année fut donc de nouveau trop froide, comme les deux années précédentes. Les mois de Janvier et de Septembre y ont surtout contribué. Les mois de Mars et de Juin en revanche furent très chauds. Les mois d'automne furent tous trop froids.

La pression atmosphérique fut dans six mois au-dessus de la normale, et dans six autres au-dessous. Elle fut en moyenne de 0.30 millim. trop haute, ce qui est dû surtout aux très hautes pressions dans les mois d'Octobre et de Novembre; les grands écarts négatifs de Mars, donnèrent quelque compensation. Le mois d'Août y contribua aussi par ses écarts négatifs, assez grands pour un mois d'été. Ainsi que pour la température, l'année commença par des écarts négatifs et finit par des écarts positifs.

A. Gemiddelde waarden en afwijkingen van temperatuur en dampkringsdrukking te Utrecht in 1897.

Moyennes et écarts de la température et de la pression atmosphérique à Utrecht en 1897.

Tabel **B.** Aan den zeekant zijn, overeenkomstig vorige jaren, de sommen der temperatuur-afwijkingen, tengevolge van den temperenden invloed der zee, het kleinst. Te Maastricht, het diepst landwaarts inliggend, dus het meest aan den invloed daarvan onttrokken, het grootst. De invloed van de zee op het klimaat blijkt dus reeds in een land zoo klein als het onze, ten duidelijkste.

B. Sommen van alle afwijkingen der temperatuur.

Sommes de tous les écarts de la température.

Tabel **C.** De sommen der afwijkingen der luchtdrukking staan in ons land in verband met de geografische breedte. Groningen, Leeuwarden en Helder in het Noorden hebben de grootste sommen; Tilburg, Vlissingen en Maastricht in het Zuiden, de kleinste. De oorzaak daarvan is, dat de centra der depressies het meest ten Noorden van ons langs trekken. De plaatsen het dichtst gelegen bij de banen, waar langs deze centra zich voortbewegen, hebben de grootste schommelingen in de luchtdrukking.

Tabel **D.** De barometer-afwijkingen wisselden in 1897 81-maal van teeken, zoodat eene afwijking in denzelfden zin gemiddeld ongeveer $4^1/_2$ dag stand hield. Langdurige positieve afwijkingen kwamen voor in Februari, October, November en December. Van 17 October—12 November, 27 dagen achtereen, was de barometer voortdurend gemiddeld ruim tien mM. boven de normale. Langdurige negatieve

Table **B.** Au bord de la mer, les sommes des écarts de température sont, conformément aux années précédentes, les plus petites, par suite de l'influence tempérante de la mer. A Maestricht, la station qui se trouve le plus dans l'intérieur des terres, et qui échappe le plus à son influence, elles sont les plus grandes. L'influence de la mer sur le climat apparaît donc déjà de la manière la plus évidente dans un pays aussi petit que le nôtre.

C. Sommen van alle afwijkingen der luchtdrukking.

Sommes de tous les écarts de la pression atmosphérique.

Table **C.** Les sommes des écarts de la pression atmosphérique sont, dans notre pays, en rapport avec la latitude. Groningue, Leeuwarde et le Helder, au nord, ont les sommes les plus grandes; Tilbourg, Flessingue et Maestricht, au sud, les plus petites. La cause en est due à ce que les centres des aires de basse pression se meuvent le plus souvent au nord de notre pays. Les lieux qui se trouvent le plus près de la trajectoire sur laquelle ces centres se meuvent, présentent les plus grandes oscillations de pression atmosphérique.

Table **D.** Les écarts barométriques ont changé 81 fois de signe en 1897, de sorte qu'un écart dans le même sens s'est maintenu en moyenne pendant quatre jours et demi. Des écarts positifs de longue durée se présentèrent dans les mois de Février, d'Octobre, de Novembre et de Décembre. Du 17 Octobre au 12 Novembre, donc pendant 27 jours consécutifs, le baromètre fut continuellement, en

afwijkingen kwamen voor in Januari—Februari en Maart—April. Zij waren van niet zoo langen duur als de positieve afwijkingen. De laatste moeten gemiddeld ook langer van duur zijn, daar de negatieve afwijkingen veel grooter kunnen zijn dan de positieve.

moyenne, de plus de dix millimètres au-dessus de la normale. Des écarts négatifs de longue durée se présentèrent de Janvier à Février et de Mars à Avril. Ils ne furent pas d'aussi longue durée que les écarts positifs. La moyenne de la durée de ces derniers doit aussi être plus longue, car les écarts négatifs peuvent être beaucoup plus grands que les écarts positifs.

D. Datum, duur en bedrag der barometer-afwijkingen in den morgen te Utrecht onafgebroken in denzelfden zin op elkander volgende in 1897.

Date, durée et sommes des écarts de la pression atmosphérique du matin à Utrecht en 1897, qui ont eu consécutivement le même signe.

Tabel **E**. De temperatuur-afwijkingen wisselden 72-maal van teeken, eene afwijking in denzelfden zin duurde dus gemiddeld ongeveer vijf dagen. Langdurige negatieve afwijkingen kwamen voor in Januari—Februari, Mei, Augustus—September, October en November. De som der afwijkingen van 19 Januari—8 Februari, was echter niet groot (54.6 graden Celsius), zoodat de koude, hoewel zij lang aanhield, niet zeer hinderlijk was.

Langdurige positieve afwijkingen waren die van Februari—Maart. Van 19 Februari—28 Maart kwamen slechts drie dagen voor, die een weinig te koud waren. De overige dagen, gedurende dat tijdvak, waren alle te warm, terwijl gedurende twee dagen (5 en 6 Maart) de temperatuur juist normaal was.

Tabel **F**. Na een zeer natte Maart en April kwam te Utrecht een buitengewoon droge periode voor in de maanden Mei, Juni en Juli. Vooral Juni en Juli waren zeer droog, en deden veel schade aan planten en gewassen. Gelukkig dat, zooals uit den regenval te Groningen blijkt, deze droogte zich niet over het geheele land uitstrekte. De nadeelige gevolgen daarvan zouden zich dan zeer zeker veel ernstiger hebben doen gevoelen. Mei en Juli waren te Groningen zelfs te *nat;* Mei zeer belangrijk. September en December waren te Utrecht zeer nat; te Groningen was gedurende die maanden de regenhoeveelheid slechts even boven normaal.

Table **E**. Les écarts de température changèrent 72 fois de signe; la durée moyenne d'un écart de même sens a donc été de cinq jours environ. Des écarts négatifs de longue durée se présentèrent de Janvier à Février, en Mai, d'Août à Septembre, en Octobre et en Novembre. La somme des écarts du 19 Janvier au 8 Février ne fut cependant pas grande (54°.6 centigrades), de sorte que, quoique le froid durât longtemps, il ne fut pas particulièrement gênant.

De longs écarts positifs furent observés de Février à Mars. Du 19 Février au 28 Mars, il ne se rencontra que trois jours qui furent un peu trop froids; les autres jours de cette période furent tous trop chauds, tandis que dans deux jours, le 5 et le 6 Mars, la température fut précisément normale.

Table **F**. Après Mars et Avril, qui furent très pluvieux, on eut à Utrecht une période d'extraordinaire sécheresse pendant les mois de Mai, de Juin et de Juillet. Juin et Juillet, surtout, furent très secs, ce qui nuisit beaucoup aux plantes et aux récoltes. Heureusement que cette sécheresse ne s'étendit pas sur tout le pays, comme on peut le voir à la quantité d'eau tombée à Groningue. Les mois de Mai et de Juillet furent même très *humides* à Groningue. Septembre et Décembre furent très humides à Utrecht; dans cette même période, la quantité de pluie tombée à Groningue, ne fut que d'un peu au-dessus de la normale.

F. Regenhoeveelheden. — Eau tombée.

Tabel **H.** Voor zooverre, dat voor de Bilt kan nagegaan worden is aldaar, behalve in December, de verdamping steeds grooter dan te Helder. De invloed der zee, in verband met de westelijke winden, welke hier overheerschend zijn, is hieraan zeer zeker niet vreemd. Des nachts is de verdamping te Helder grooter dan te de Bilt. Daar de verdampingsmeters op beide plaatsen niet geheel met elkaar overeenkomen, zijn deze gevolgtrekkingen niet in alle deele geheel te verdedigen.

Table **H.** Pour autant qu'on a pu l'observer au Bilt, l'évaporation y est toujours, sauf en Décembre, plus grande qu'au Helder. L'influence de la mer, jointe aux vents d'ouest qui prédominent en ce dernier endroit, n'y est certainement pas étrangère. La nuit, l'évaporation est plus grande au Helder qu'au Bilt. Les évaporomètres des deux stations n'étant pas tout à fait semblables, ces conclusions ne peuvent être défendues en tout point.

Tabel **K.** In vijf maanden hebben de NE-winden de overhand boven de SW-winden en in vier maanden de N-winden boven de S-winden. In den regel is de verhouding voor de S- en SW-winden gunstiger. SW-winden kwamen het meest voor (564), dan volgen W- en S-winden met 394 en 307; SE-winden waren het minst talrijk (86). In Februari en Juni kwamen veel windstilten voor.

Table **K.** Dans cinq mois, les vents du nord-est prédominent sur les vents du sud-ouest, et dans quatre mois, les vents du nord sur les vents du sud. Dans la règle, la proportion est plus favorable pour les vents du sud et du sud-ouest. Les vents du sud-ouest sont les plus fréquents, 564 fois; puis viennent les vents d'ouest et du sud, respectivement 394 et 307 fois; les vents du sud-est furent les moins nombreux, 86 fois. En Février et en Juin, il y eut beaucoup de calmes.

1897.

Van de 49 maal dat een ongunstig verschil voorkwam, werd het 21 maal door storm gevolgd, 28 maal werd men dus gewaarschuwd, zonder dat er storm volgde. Eenmaal, 30 December, stormde het zonder dat men vooraf door het verschil gewaarschuwd was. Het gradient was echter dien datum groot, hoewel het verschil nog geen 4 mM. bereikte.

Sur 49 fois qu'un gradient défavorable se présenta, il fut suivi 21 fois d'une tempête; on fut donc averti 28 fois sans qu'une tempête s'ensuivît. Une fois, le 30 Décembre, on eut une tempête, sans en avoir été averti par le gradient, qui, quoiqu'il fût grand, n'atteignait pas 4 millimètres.

Datums, waarop een ongunstig verschil in de barometer-waarnemingen of een storm van dertig of meer kilogrammen op den vierkanten meter voorkwam.

Dates avec un gradient défavorable ou une tempête de trente kilogrammes ou plus par mètre carré.

Tabel **M.** De invloed van de helderheid van den hemel op den dagelijkschen gang der temperatuur blijkt vooral te de Bilt ten duidelijkste. Te Vlissingen minder, doordat aan den zeekant de luchtbeweging levendiger en daardoor de uitstraling geringer is.

Table **M.** L'influence de la sérénité du ciel sur la marche diurne de la température se fait sentir surtout au Bilt. A Flessingue, cette influence est moins grande; les mouvements de l'atmosphère étant plus vifs au bord de la mer, ce qui fait que la radiation est plus faible.

M. Grootte van den dagelijkschen gang der temperatuur naar de helderheid.

Amplitude diurne de la température selon la sérénité.

Maanden.	DE BILT. Som der helderheid. — *Somme de la sérénité.*			VLISSINGEN. Som der helderheid. — *Somme de la sérénité.*			*Mois.*
